Environmentally Friendly Grease Away™ Will Unblock Your Drains

Fats, oils and grease, commonly known as FOG, are a natural by-product of the food processing and preparation industry. It can lead to blocked drains, foul smells and failures in sewer maintenance equipment such as pumps. Using chemicals and enzymes can relocate your problem further into yours or the water authority drain lines. This can damage pipe-work and it still won't solve the problem. Mr. Rooter® Plumbing has a cost-effective and environmentally friendly system that breaks down grease problems for good. *Grease Away* is a live bacteria that consumes grease and oil from drain lines, grease traps, pump stations, septic tanks and anywhere else grease creates problems. These bacteria are non-toxic, non-pathogenic (not disease carrying), live and highly active. The greatest benefit is they turn grease and oil waste into harmless carbon dioxide and water.

Mr. Rooter Plumbing Service

Our licensed service professional will treat all ancillary and floor drains with *Grease Away*. We will treat equipment and drains with bacteria along with checking your injection system. Any troubleshooting necessary will be done onsite and a detailed report will be provided.

Benefits:

- Automatic and maintenance free
- No more drain clogs related to grease
- No more odor of rancid grease
- Significant reduction in pumping grease traps/interceptors
- Radical reductions in pump station failures
- No more costly cleaning of drain line backups
- No more employee dissatisfaction with foul odors, health hazards or cleaning messy backups
- Improved discharge levels
- Financial savings from drainage failures and fine abatement
- Meets water authority requirements
- Meets building regulation requirements

Application examples:

Restaurants, hotels, hospitals, sports stadiums, shopping centers, supermarkets, food processors and education facilities.
