

Drain Cleaning

Most homeowners know how to work a plunger and pour chemical drain cleaners down a backed up drain. Yet, sometimes these measures are insufficient for drain cleaning. Either the drain remains clogged or the drain perpetually re-clogs. When this happens, let Mr. Rooter Sewer & Drain take care of your clogged drains and sewer pipe issues. We have the experience, training and equipment to make your sewer & drain problems go away fast and stay away! Our technicians are experienced at cleaning drains and sewers.

HydroScrubbing

Mr. Rooter HydroScrub™ service is the most effective method known to restore old drains to a like-new condition. A drain or sewer line choked with roots and years of accumulation of grease, soap and sludge can be restored to near original condition with the skill of your Mr. Rooter technician.

HydroScrub™ Features:

- Safe on all pipes
- Removes grease, sludge, mud, silt, fibrous material, etc.
- Long lasting results
- Avoids damage from backed-up lines
- Service scheduled for your convenience
- Cleans entire line by high pressure water

While our HydroScrub™ system won't repair a broken sewer, it can restore unrestricted drainage to sewer and drain lines to a like-new condition by using high-pressure water moving through tiny openings located in nozzles, removing roots, grease and sludge from the line. The combination of the high pressure and water volume provides a drain cleaning system unattainable by conventional methods. For lines with a history of problems, the HydroScrub™ can be used to inject specific amounts of our exclusive Mr. Rooter degreaser which actually enhances the cleaning power of the HydroScrub™. After the initial cleaning, your Mr. Rooter technician will recommend a periodic maintenance program to help insure an uninterrupted flow.
